PROJECTS

FarmBuddy (2020) – It's our second-year group project. The platform is to help farmers improve their activities. And also connect farmer and buyer. Here we used React Native for mobile app front-end, Node.js for server-side, MongoDB for database and R/Python for Data-Science.

RentalVehicleManager (2019) – It's my OOP module assignment in the first year. In this system vehicle, the rental manager can manage the system and the user can reserve the vehicles. Here I used Java for back-end, Node.js for server-side and MongoDB for the database.

Music-Item (2019) – It's my assignment in first-year. It's an online music store management system. Here I used Java for back-end, Node.js for server-side and MongoDB for the database.

TravelGo (2019) – It's a group project in my first year. It's a tourism-based website. Here I'm the group leader and did a major part of this project. Here we used Html5, CSS3, Bootstrap, JavaScript for Front-end, Node.js for server-side and MongoDB for the database.

WorkPara (2017) - It's also full-stack web. This project gives a job chance to employees and solves the problems who have needed emergency work. I used Html5, CSS3, Bootstrap, JavaScript for Front-end, Node.js for server-side and MongoDB for the database.

Show Tracker (2017) - It's a full-stack web. we developed front-end and back-end and database also and here we did authentication, Search, Select and Add Shows System, and we called APIs of every TV Show and displayed their scheduled times as well.
